

Hello everyone!

I would like to invite you to view my e-poster possible GT5 events in Costa Rica from 2010 onward, selected from costarican seismic network located at Universidad Nacional de Costa Rica OVSICORI-UNA . My research focuses on the seismic activity in Costa Rica and how it can be used to identify GT5 events. I will be presenting my findings on 21 June at 9:00 P2.3-825. We found that seismic catalogs like the one from OVSICORI-UNA, which have a good distribution of digital seismic stations, are important for proposing GT5 events. These events serve as calibration earthquakes.

Thank you!

**Fig. 1.** The figure shows GT5 candidates represented by red circles and seismic stations that recorded them represented by blue triangles, a total 178 events were identified.
