

Celso Alvizuri
NORSAR

P2.2-580

- Our poster is about: **Classifying seismic events like explosions, earthquakes, and collapses, using a probabilistic approach**
- I am going to tell you why: **Estimating how likely each event type is can support reliable monitoring and verification**
- And what we did about: **Developing a method that turns uncertainty in the seismic data into clear event-type probabilities.**
- The most important result of our work is: **A tool that helps to make confident, reproducible decisions based on seismic evidence.**
- *To find out more, come over for a chat in front of our poster!*
