

Celia A. Caveda Ramos, Enma O. Ramos Viltre
Center for Radiation Protection and Hygiene

P2.3-139

- Our poster is about the influence of the routine discharges over the radioxenon background in the northern Caribbean Sea during the influence of the migratory anticyclone.
- I am going to tell you why is important to study the influence of the migratory anticyclone on the the radioxenon background in the northern Caribbean Sea.
- And what we did about to analyse the trajectories of the air masses from the nuclear power plants located in Florida peninsula.
- The most important result of our work is the trajectories transited the northern Caribbean Sea when the center of the migratory anticyclone was in the center of North America and in the state of Texas.
- If you want to find out more, come over for a chat in front of our poster
