P2.4-271

- Our poster is about managing and preserving the seismological archive at the Timisoara Observatory in order to collect valuable information on local and regional seismicity, as well as on nuclear explosions
- I am going to tell you why is important to save this legacy data as soon as possible
- And what are the steps that we made to achieve this goal
- The most important result of our work is the first set of information that was shared and included in NELD: 16 nuclear explosions recorded at several stations in the western part of Romania
- If you want to find out more, come over for a chat in front of our poster P2.4-271
