P3.1-415

Ensuring IMS stations network sustainability is complex across varied environments, needs and risks. Continuous upgrades and improvements to the WNRS, a key component for ensuring infrasound signal quality are driven by operational feedback and field experience.

Come over to see our poster if you would like to find out more about WNRS and related :

- Innovation on manufacturing & installation methods
- Development of new accessories
- Interesting approach for installation configuration & related preparation work
- Study and analysis related to product sustainability
