SAUNA III is setting the standard for remote nuclear activity detection—delivering precision, automation, and reliability trusted worldwide.

Through years of field experience, we've refined every aspect of the system:

- ✓ Optimized xenon sampling
- ✓ Upgraded hardware and filtration
- ✓ Modernized software for robust performance

### Why it matters:

SAUNA III is CTBTO-certified, deployed in the IMS network, and engineered for long-term sustainability. Its modular design and high uptime make it the preferred choice for noble gas monitoring.

### Want to see how we built the most reliable xenon detection system in the world?
