

D. Stasic, S. Laban
Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO)

P3.2-865

- Our poster shows the results of the comparison between IDC automatically generated RN reports (ARRs) and reviewed RN reports (RRRs) for particulate samples and baseline reports generated by seven participating NDCs in the 2024 Experiment. Metrics for peak detections, radionuclide identification, and activity concentration were introduced, and these metrics were used to benchmark the IDC-generated products relative to the NDC baseline.
- If you want to find out more, come over for a chat in front of our poster!
