

- Our poster is about interlaced statistics between the REB, SEB and SSEB
- Considering the progress of the IMS [SHI] commissioning (~95%) and the IDC production, you are going to learn what are the expected percentages of REB events that in the future will result included in the SSEB.
- The work is based on statistics collected from the IDC archive database.
- Observing 25 years of data, the last 13 years of data (2012-2024) provide a good benchmark period for observations.
- If you want to find out more, come over for a chat in front of our poster P3.5-882

2005: pending analysis of (some) Indian Ocean Earthquake aftershocks (Sumatra-Andaman)

Figure 5. SSEB (PRODID=28) overlying the REB (PRODID=4)
