Volcanological and Seismological Observatory of Costa Rica

P5.2-382

Training and Capacity Building: Costa Rica, specifically OVSICORI-UNA and the country's National Data Centre users, has received extensive training from the CTBTO on IMS monitoring technologies. This training has also been extended to users from the broader Latin America and the Caribbean region, enhancing their skills in data analysis.

Expansion of Monitoring Capabilities: Costa Rica has collaborated with the CTBTO to expand its monitoring infrastructure, notably by setting up a temporary infrasound station. The goal is to further broaden participation in IMS data analysis to include other national institutions like SINAMOT and the UNA School of Physics.
