

C.I. Rivera Cárdenas and E.A. Solano Hernández

Instituto de Ciencias de la Atmósfera y Cambio Climático, Escuela Nacional de Estudios Superiores Unidad Morelia, Universidad Nacional Autónoma de México (UNAM)

- What started as an Academic Forum Idea in 2014, continued as a formal class at UNAM
- How did we propose this subject and what we did during class to make possible the understanding and involvement of students with the CTBTO activities in the future?
- The most important result of our experience teaching this class was to realize that students are highly motivated and looking forward to be able to use datasets for scientific and civil purposes
