

Gunnar Vrang  
CTBTO, Public Information Section

P5.3-853

- Promoting the CTBT in a media landscape where mis- and disinformation lead to misleading narratives
- Events in October 2024 have been subject to research on how to counter misleading information connected to natural seismic events
- The hypothesis is fact-based information early in a news cycle, preferably in collaboration with other international organisations, is the most efficient way of countering disinformation.
- More studies are needed.
- If you want to find out more, come over for a chat in front of our poster
