

Nataly Subrtova
Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO)

On-Site Inspection (OSIs) under the Comprehensive Nuclear-Test Ban Treaty will place the entire Organization – not only the inspectors in the field – under intense scrutiny. Senior management must therefore be ready to lead, decide and communicate under unprecedented time pressure.

In 2022 and 2023, the CTBTO Provisional Technical Secretariat conducted 2 tabletop exercises to train and test senior leadership in realistic OSI scenarios. They confronted challenges such as handling of sensitive information and data, managing public communications, responding to the Inspected State Party allegations, and ensuring the safety of inspectors and operations in volatile environments.

Find out how the CTBTO trained its senior management through **realistic OSI role-play**.
