-19 Protocols, preventive measures, and recommendations for On-Site Inspection.

Wednesday 30 June 2021 10:00 (15 minutes)

COVID-19 is an infectious disease caused by the new coronavirus SARS-CoV2, recently discovered and for which there was no history of human pathologies. Currently COVID-19 is a pandemic that affects many countries around the world.

The objective of this presentation is to apply safe work protocols to protect people from any situation that implies a potential risk of contagion with COVID-19, during an On-Site Inspection or Exercise.

Ensure the health and psychophysical integrity of the OSI Inspection team, representatives of the Inspected State Party and third parties linked to the services provided to the On-site inspection through the implementation of preventive measures and recommendations that guarantee safe work procedures.
